

# Valor Concepts, LLC

*"Concept to Completion"*

## ABOUT VALOR CONCEPTS

Security/ IT Engineering, Design and Consulting are just some of the main focuses of Valor Concepts. Our virtual setup allows us to help streamline your security system & IT engineering needs. We have taken our years of experience, both in the physical/ electronic security industry and the software/ technology world, and merged them into a business which is uniquely human but very much the wave of the future.

Valor Concepts offers Security/ IT System Engineering for Integration Companies and other security related organizations. We can take a project from design to

completion including specification write-ups, riser diagrams, AutoCAD work and project management. Traditional Security/ IT Consulting is also offered for both End-Users and Integration Companies to make Valor Concepts a full circle of security system & IT support including risk evaluations and bid creations.
